

Infant Brain Imaging Study for Down Syndrome

FOR IRB USE ONLY
IRB ID #: 201810114
APPROVAL DATE: 08/10/23
EXPIRATION DATE: 08/08/24

Our Goals:

The study's goal is to increase our understanding of how the brain is affected in infants with and without Down syndrome. This may in turn provide clues that could eventually help identify therapeutic targets for intervention for individuals with Down syndrome.

Who Is Eligible?

Families with an infant (6 months or younger) diagnosed with Down syndrome. Expectant parents are encouraged to contact us.

About Your Visit

Your infant and a parent will:

- Travel to your region's site when your infant is 6-, 12-, and 24-months old. Each visit includes developmental assessments and an MRI scan during natural sleep (no sedation).
- Receive reimbursement for study related expenses and up to \$300 compensation per visit.
